TB: tuberculosis

TB symptoms: Respiratory symptoms such as cough, sputum expectoration, bloody sputum, and hemoptysis; and other symptoms such as wheezing, chest pain, back pain, dyspnea, fever, night sweating, fatigue tendency, and weight loss.

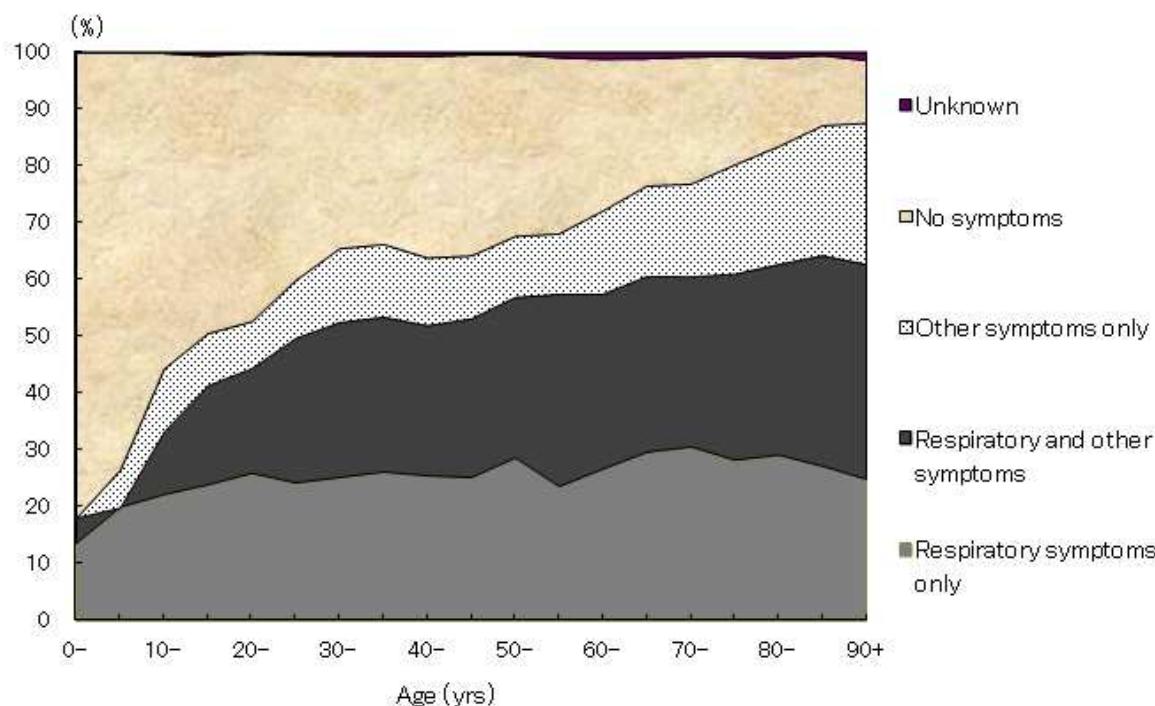

Figure 1 Proportion of symptoms among newly notified pulmonary tuberculosis patients by 5-year age group, in 2010

Respiratory symptoms include cough, sputum expectoration, bloody sputum, and hemoptysis.  
 Other symptoms include wheezing, chest pain, back pain, dyspnea, fever, night sweating, fatigue tendency, and weight loss.

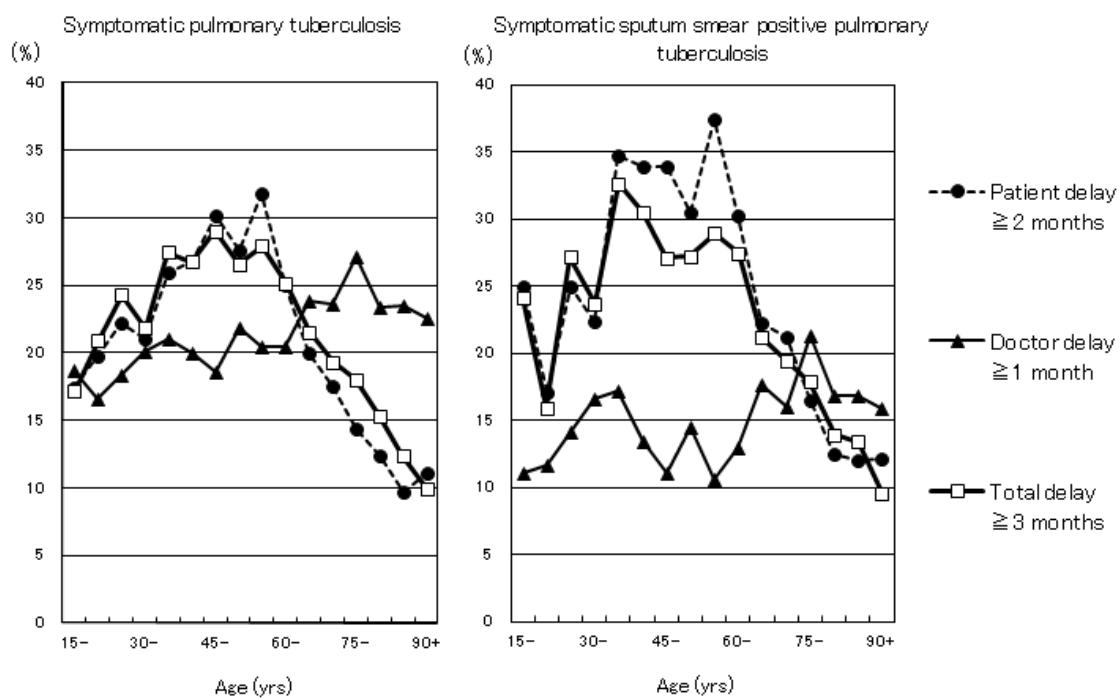

Figure 2 Proportion of patient delay, doctor delay and total delay among symptomatic pulmonary tuberculosis patients by 5-year age group, in 2010

Patient delay: The amount of time between the onset of symptoms and the initial consultation visit to a medical institution is 2 months or more.

Doctor delay: The amount of time between the initial consultation visit of the patient to a medical institution and the diagnosis of tuberculosis is 1 month or more.

Total delay: The amount of time between the onset of symptoms and the diagnosis of tuberculosis is 3 months or more.
